Constant Current IUI Pulse Termination

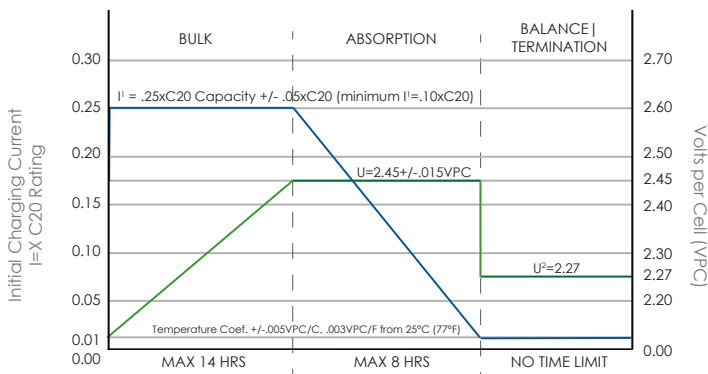

NOTE: This algorithm uses a pulse termination criterion. As a safety precaution during the Finish phase, if the average cell voltage, or volts per cell (VPC), exceeds V2 and the charger output has been on for more than 30 seconds, the output is shut off until the VPC falls to V3. The finish phase then resumes and this "pulsing" continues until the target overcharge (108% - 112%) is reached.
